Davison, MI | 989-350-7243

Education:

University of Michigan Bachelor of Science, Software Engineering. Jan 2026 – Present (Est. May 2028)

Clearance, Certifications, and Training:

Security Clearance

CPR Certification Oct 2024

U.S. Air Force 1D7X1Z Technical School, August 2023 – December 2023

--Learned Python, JS, HTML/CSS, SQL, Git over duration of 5 months, culminated with a functional local website built leading a team of 4 utilizing all languages learned.

Technical Skills:

RedHat/CentOS Linux, Windows Desktop

Python, Javascript, SQL, HTML/CSS

Git, Jira, Confluence, MS Excel, and Stackoverflow

Worked with C++/Redis/Podman/Docker/Ansible/SQLAlchemy/AsyncIO

Leadership:

U.S. Air Force, Staff Sergeant, Active: July 2021 – January 2026

--Frontline supervisor to 42 junior Airmen, ensuring health and morale, maintained proper certifications, ensured regulation compliance and attendance accountability, and training for all personnel

--Non-Commissioned Officer In-Charge of 12 Airmen, contributed to awards/decorations and physical training readiness direction of 62 member organization in weekly leadership meetings

Work Experience:

U.S. Air Force, 1D774P (Software Engineer), Active: August 2023 – January 2026

--Frontline Engineer for an organization with 1000+ customers worldwide, handled various customer requests, monitored 560+ data sites for latency and outages on an in-house Graphical User Interface

--Developed scripts in Python to automate common tasks, altered and implemented solutions in Python to accommodate changing requirements, improved logging for all generated files in C++

--Managed several SQL databases for a multi-integrated cross DoD organization, migrated records across servers for Continuity of Operations Program, returned query results to customers upon request of data

U.S. Air Force, 3P071 (Security Forces), Active: October 2017 – August 2023

--Directed 70 member team in maintenance/defense of $19.2 billion Nuclear ICBM (Intercontinental Ballistic Missile) enterprise, served as frontline command and control officer for forces and 150 launch facilities in 3,200 square miles

--Emergency management command role for one critical event, directed personnel to evacuate local area, planned alternate routes for civilians to avoid possible injury/death for 1,200 people

--Patrolman on Scott AFB, provided security and law enforcement for 23,500 people, government property, and protection-level assets, conducted entry-control duties

Meijer of Gaylord, MI: June 2016 - July 2017

--Receiver/Stocking personnel, responsible for inventory placement and stocking shelves

Culver's of Gaylord, MI: June 2014 - June 2016

--Worked front of house, maintained cleanliness of the restaurant, worked as cashier/runner, responsible for opening front of house frequently, ensured guest satisfaction

Software Dev Project:

Frontline Engineer

--Diagnosed over 1,000 customer issues, resolved by coordinating with partnered agencies to validate their input data at collect—**Example**: When a customer would raise an issue with quarantining data, I would contact the collector of the data to rectify the missing or incorrect header information that caused the quarantine

--Confirmed and reconciled missing data complaints via use of SQL queries, GUI, pubsub commands on redis—**Example**: Customer would ask, "Why am I not seeing data on XX topic?" Involved investigating SQL databases to ascertain if we had received said data, or investigating internal logs/a partner agency's GUI to determine data outage/issue

--Coordinated GUI request to dev team, used JIRA ticketing system to take in customer requests, verified requests were not already completed/being worked on, submitted dev ticket and informed the applicable members of requests

--Worked with podman containers when implementing new versions of processing libraries, involved bringing up/tearing down containers as required

Programming

--Developed python scripts to automate tasks that became monthly asks, involved working with SQL connector/AsyncIO/redis connection—**Example**: Ask from a customer that became a monthly task – implemented AsyncIO, argparse, and SQL connector to generate an output of data gathered by a specific collector and compare their stats to overall collect/output

--Junior-level C++ dev work with improving logging of all generated log messages for incoming files and processing of said files. Involved reading through 20+ files and locating logging message code and altering their construction to improve logging readability/frequency

--Altered existing code solutions of processing data capabilities, involved familiarizing with source code and modernizing to meet newest standard of Python version—**Example**: Changing a python solution for processing of a specific set of data that would otherwise not be able to be processed – altered methods/functions to account for updated customer needs

Managed SQL Databases

--During COOP migrations, transferred data sites from one server to another, ensuring syntactic and semantic compliance with established SoPs. COOP ensured the organization system redundancy and eliminated a single-point-of-failure operation

--Queried several databases to JOIN and neatly compile/format customer-requested information on a case-by-case basis—**Example**: Customer asked, "How often are you seeing data from XXX collector? How much volume was contained within the sent data?" Combined two databases to create a presentable table with identifiable information about the collector/data and answered questions.

Software Dev School

--Firehose level knowledge learning, spent several weeks with Python to build foundational skills for programming (OOP/Functions/SQL Connector), 2 days w/ SQL, 7 days w/ JS, 3 days with HTML, 1 day CSS

--Led the 5 person team behind the one week capstone project that culminated in a functional (locally hosted) website that would POST/GET and connect with/create (if absent) SQL database to inform the user on their results. Website was a "buzzfeed quiz" that told you who you were most like based on a series of questions

Security Forces:

--Required knowledge memorization "bold-faced" of weapon systems that I was certified on, and knowing local guidance at all times and state code familiarization if conducting law enforcement

ICMB C2

--Was C2 at the "Command Center" in the missile field at F.E. Warren AFB. "Flight Security Controller" involved handling and coordinating maintenance and security for 150 sites over the duration of a week. Coordinated w/ several local agencies and Missileers (Company-Field grade officers)

--Security C2 involved ensuring compliance with DoD directives and Wing guidance on weapon implementation and posturing measures. Also involved ensuring high priority contingencies were in place and ready to go at a moment's notice

--Was emergency management incident commander for a PSRE fault in the missile field, cordoned a large area off and planned alternate routes for civs to take in place of the cordoned area to potentially save their life

Patrolman

--Law enforcement on Scott AFB: issued over 200 citations for traffic violations, dealt with underage drinking of several personnel, detained and held suspected drunk drivers and disorderly individuals. Administered rights advisement/conducted witness/suspect statements

--Entry-control involved posting at a gate and ensuring compliance of all prospective visitors/residents of the military installation. Requirements outlined in Wing guidance and AF instruction—**Example**: Posting at G-01 from 1915 until 0545, knowing wing guidance for entry during those times (ie: visitors without CACs must be holding a visitor's pass/100% ID Check)

Leadership:

Staff Sergeant

--As a NCO, you are responsible for the well-being and organization of your "troops"/subordinates. Involved tracking their medical readiness, physical training requirements, certs needed/held. Also involved getting to know your subordinates, knowing that leading is a different approach for everyone you lead (one shoe does *not* fit all), knowing that emotional intelligence is an important attribute. It was equally as important to know the delineation of professional/personal relationships. Also involved recognizing your people for everything you could – recognition is huge in the military and it was probably the most rewarding aspect of being a NCO. Usually in charge of no more than 4 at a time, I was directly responsible for a total of 42 Airmen over my tenure as a NCO.

Non-Commissioned Officer In-Charge

--As a NCOIC, you are put into a position similar to a regular NCO, but you could commonly find yourself put into a role where you are responsible for other NCOs as well as junior Airmen. During my tenure as a NCOIC, I was responsible for 10 other NCOs and 2 Airmen. Required knowledge of their readiness items, certs held, annual training requirements, and knowing the morale of all assigned to you. Also involved working closely with Flight Leadership and communicating issues the section had if any cropped up.
